EXPERIENCE

Rewind

Full-Stack Cloud Developer

AUG 2019 - PRESENT

- Implemented enhancements to company administrative interface to bundle accounts, change billing plans, and cancel subscriptions using Stripe API
- Helped design and build a webhook delay and aggregation solution using AWS Lambda, SQS and DynamoDB
- Building custom objects in Hubspot for tracking customer data in a manner that mirrors internal DB structures
- Built a new on-boarding flow for high value Intuit customers to easily transition into agreed-upon wholesale rates using React and Stripe API

PERSONAL PROJECTS

Planks.io

RAILS - REACT - POSTGRES - HEROKU

- Non-profit and non-partisan social platform for political policy and local topic discussion in a welcoming yet professional environment
- Built from the ground up with Ruby on Rails, React.js and hosted using Heroku
- Dockerized development environment and separate admin app share common library via Rails engine Ruby gem
- Custom built Github workflow actions re-build docker image and Ruby gem upon merges with main branch and push to Github Packages repos

Warships

GO

- Local multiplayer console-based Battleship style game built for team play
- Implements a server/client application model utilizing Go's native RPC library
